Duration	3 mins 36 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

a. Deleting elements from a list
b. Sorting elements in a list
c. Inserting elements into a list
d. Determining whether an element is present in a list ✓

Question **2**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. There must be a mechanism to access middle element directly
b. Requirement of sorted array is expensive when a lot of insertion and deletions are needed
c. Binary search algorithm is not efficient when the data elements more than 1500 ✓
d. Must use a sorted array

Question **3**

Correct

Mark 1.00 out of 1.00

What is the time complexity of linear search in the worst case?

a. O👎 ✓
b. O(n log n)
c. O(1)
d. O(log n)

this element

Question **4**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

- a. Linear search ✓
- b. Merge search
- c. Bubble search
- d. Quick search

Question **5**

Correct

Mark 1.00 out of 1.00

What is the advantage of binary search over linear search?

- a. Binary search can find multiple instances of the target element
- b. Binary search does not require dividing the list
- c. Binary search has a lower time complexity on large, sorted lists ✓
- d. Binary search works on unsorted lists

Question **6**

Correct

Mark 1.00 out of 1.00

_____sort is the simplest sorting algorithm that works by repeatedly swapping the adjacent elements in case they are unordered in n-1 passes.

- a. Complexity
- b. Selection
- c. Insertion
- d. Bubble ✓

Question **7**

Correct

Mark 1.00 out of 1.00

During a linear search, what is the maximum number of comparisons needed to find an element in a list of size n?

- a. n/2
- b. log n
- c. n-1
- d. n ✓

this element

Question **8**

Correct

Mark 1.00 out of 1.00

In _____ checks the elements of a list, one at a time, without skipping any element.

a. Binary search

b. Hash search

c. Linear search ✓

d. Both (1) & (3)

Question **9**

Correct

Mark 1.00 out of 1.00

In which type of search is the list divided into smaller sublists during the search process?

a. Sequential search

b. Hash search

c. Linear search

d. Binary search ✓

Question **10**

Correct

Mark 1.00 out of 1.00

If a list contains 1000 elements, how many comparisons would a binary search typically make in the worst case?

a. 500

b. 100

c. 1000

d. 10 ✓

Question **11**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 99; what are the mid values(corresponding array elements) in the first and second levels of recursion?

a. 90 and 99 ✓

b. 89 and 99

c. 89 and 94

d. 90 and 94

this element

Question **12**

Correct

Mark 1.00 out of 1.00

Which of the following is not the required condition for a binary search algorithm?

- a. There must be a mechanism to delete and/or insert elements in the list ✓
- b. There should be direct access to the middle element in any sublist
- c. Number values should only be present

  Number values should only be present
- d. The list must be sorted

Question **13**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

- a. It can be applied only if the list is sorted ✓
- b. It works on unsorted lists
- c. It compares elements sequentially
- d. It always starts from the beginning of the list

Question **14**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

- a. Linear
- b. Binary ✓
- c. Hash
- d. Both (1) & (3)

Question **15**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

- a. The last element is returned
- b. The search is considered unsuccessful ✓
- c. The first element is returned
- d. An error is raised
